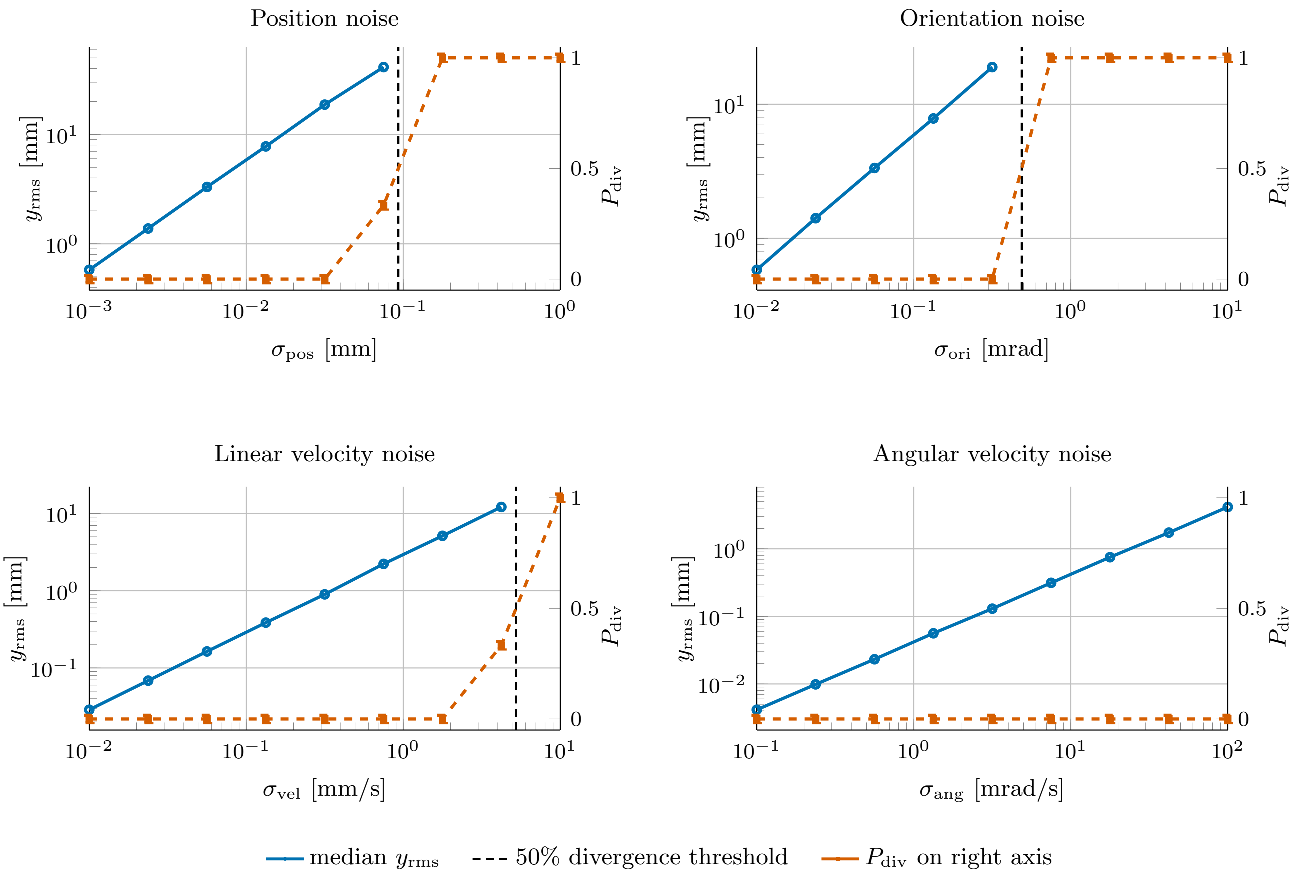
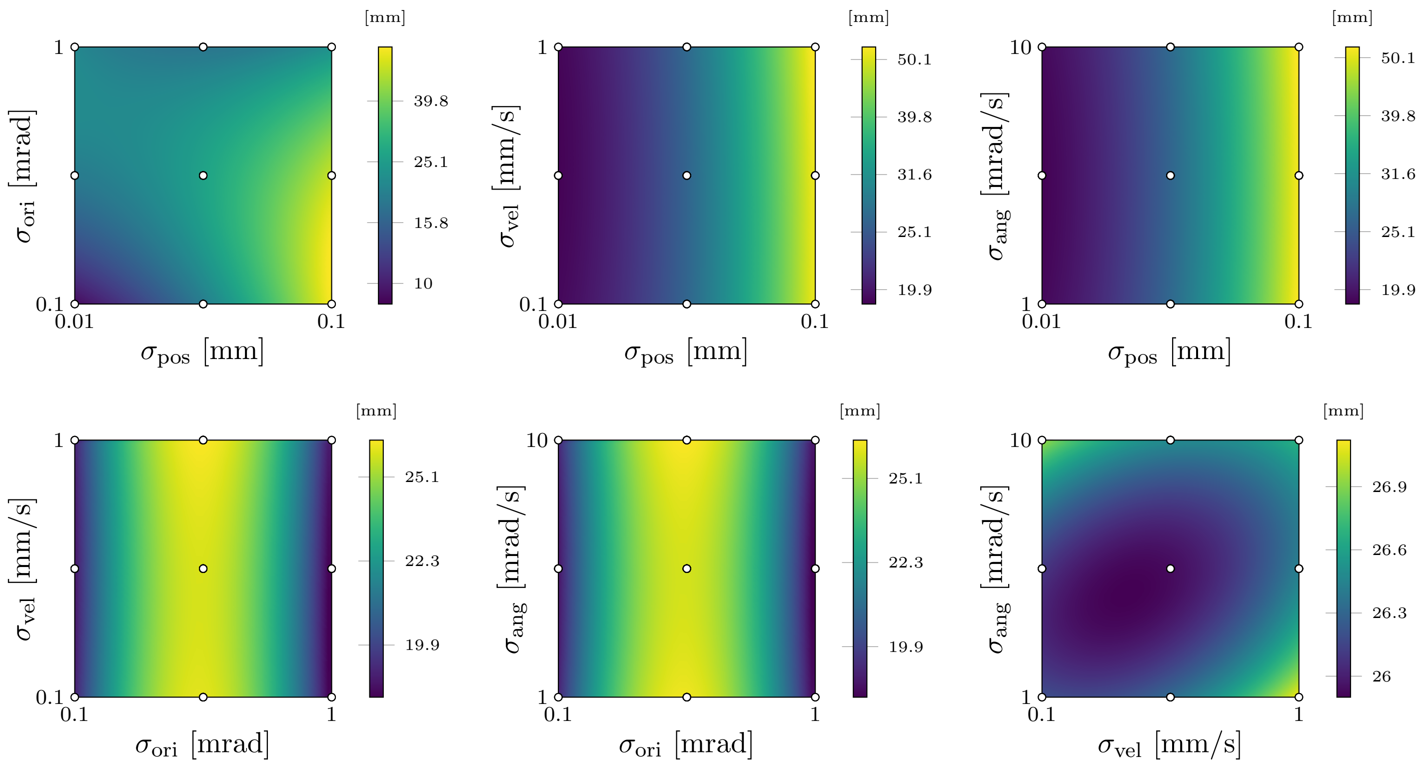
Per-factor noise sensitivity (NMPC 200 Hz)

y_{rms}: weighted RMS of state tracking error over the last 50% of each run; replicates per noise level: 3.



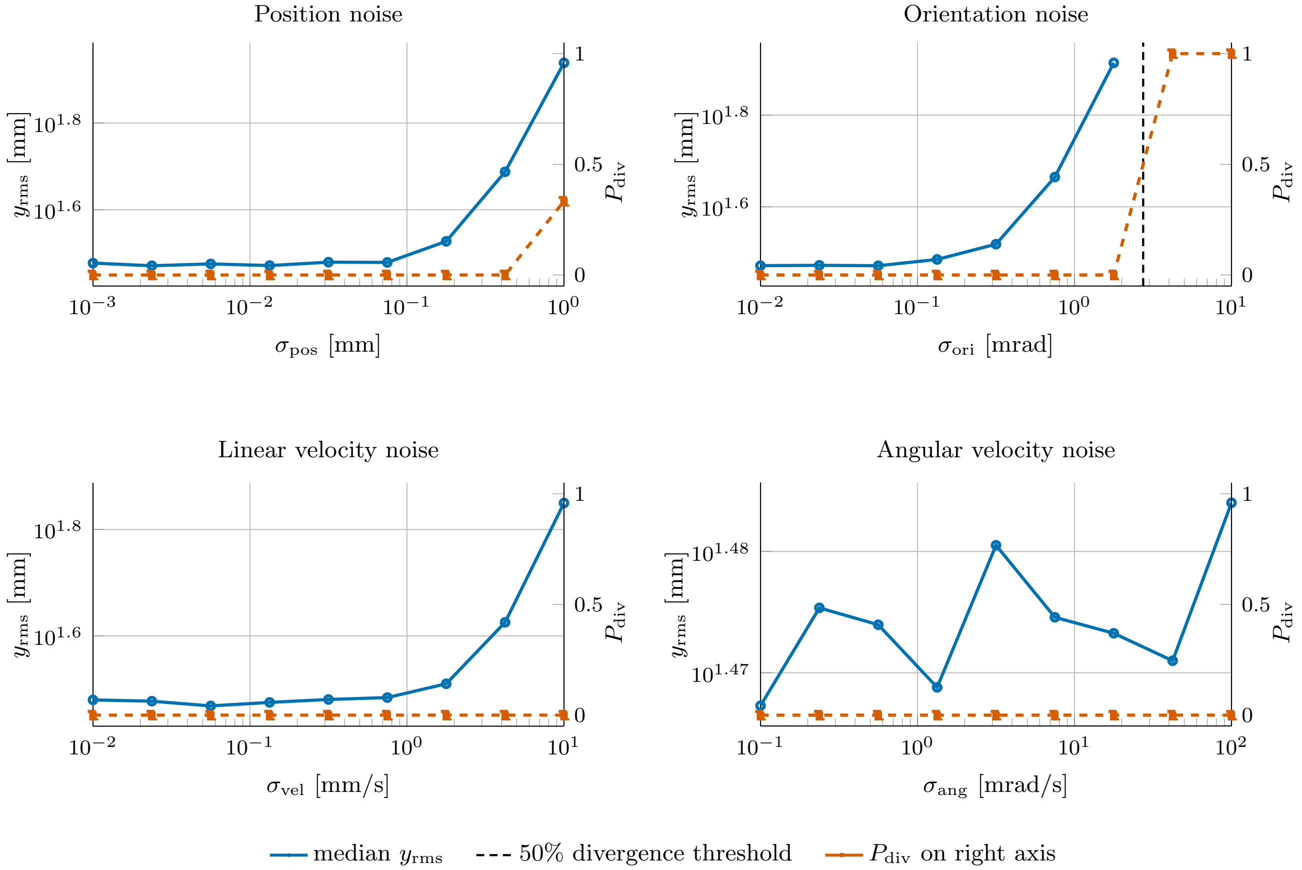
Response surfaces of tracking error y_{rms} [mm] (NMPC 200 Hz)



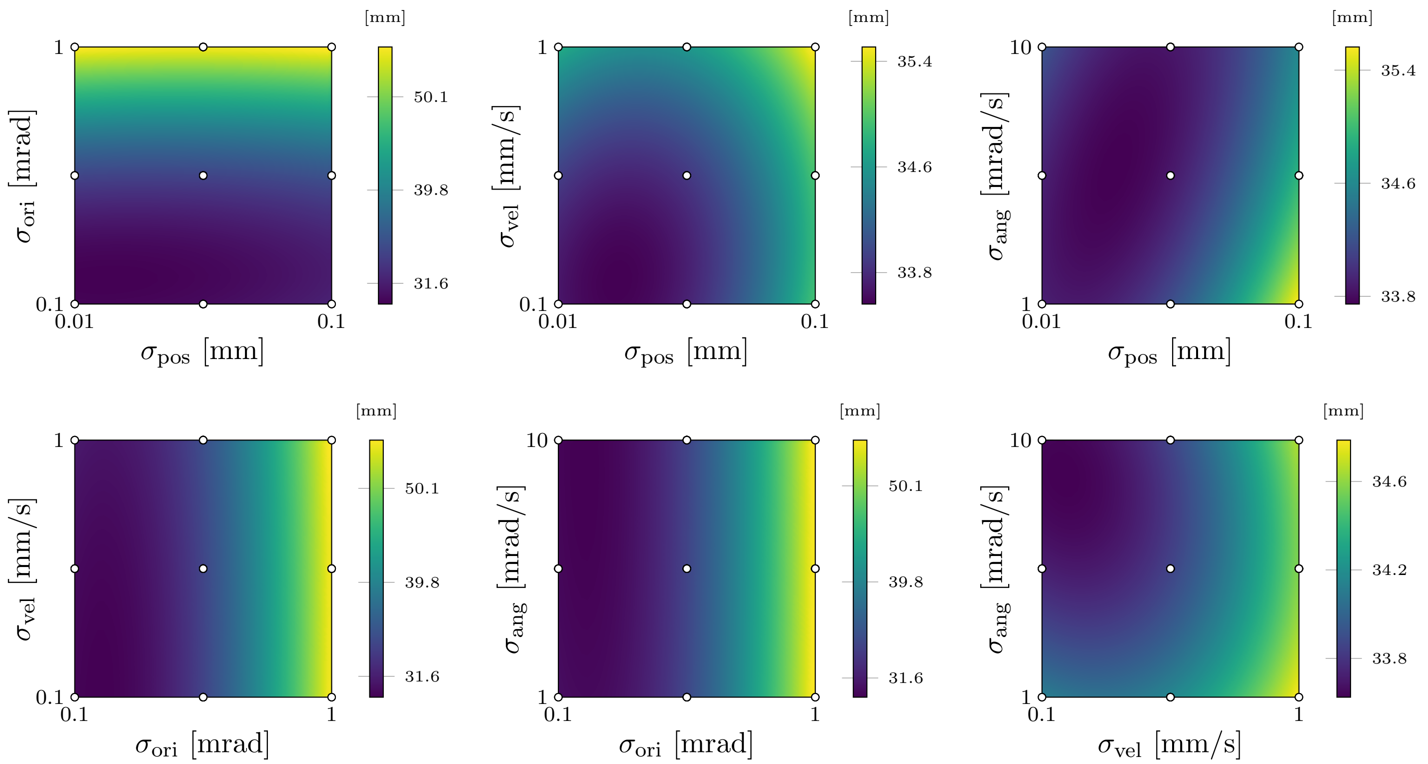
∘ Box–Behnken design points (projected onto each pair). Each panel uses its own colour scale.

Per-factor noise sensitivity (RL 1000 Hz)

y_{rms}: weighted RMS of state tracking error over the last 50% of each run; replicates per noise level: 3.



Response surfaces of tracking error y_{rms} [mm] (RL 1000 Hz)



∘ Box–Behnken design points (projected onto each pair). Each panel uses its own colour scale.
